Professional Summary

Senior Quality Analyst with 8+ years of software quality assurance experience, with strong expertise in functional testing and BFS / Capital Markets applications. Experienced in API validation using Postman, database validation using MySQL, Microsoft SQL Server Management Studio and MongoDB, and test/defect management using qTest, ALM and Jira. Hands-on experience incorporating AI-assisted tools including Helios, Aiden, Koala-T and GitHub Copilot into testing workflows and test-case generation. Also skilled in UI automation using Selenium, Playwright and Robot Framework, with practical experience in Python/Pytest framework design, CI/CD and GitHub integration. Targeting QA Automation Engineer roles that combine deep functional/domain knowledge with modern automation practices.

Core Capability Snapshot

Functional Testing	BFS / Capital Markets	API Testing - Postman
Selenium	Playwright	Robot Framework
Python / Pytest	POM / DDT / Keyword-Driven	Explicit Waits
qTest / ALM / Jira	MySQL / SQL Server / MongoDB	Allure / Pytest HTML
Git / GitHub	CI/CD / GitHub Actions	AI-Assisted Testing

Professional Expertise

Functional & Quality Engineering

- 8+ years of hands-on software testing experience across functional, regression, integration, system and end-to-end validation.
- Strong experience in test scenario design, test-case preparation/execution, defect analysis, retesting and regression coverage.
- Experienced with qTest, ALM and Jira for test management, traceability and defect lifecycle activities.

BFS / Capital Markets Domain

- Working domain knowledge in Banking and Financial Services with exposure to Capital Markets business applications.
- Ability to understand business flows, translate requirements into test coverage and validate business-critical workflows.

API & Database Validation

- Postman for API request execution, response/status validation and service-level testing.
- Database validation using MySQL, Microsoft SQL Server Management Studio and MongoDB to verify application data and backend results.

AI-Assisted Testing

- Applied Helios, Aiden, Koala-T and GitHub Copilot in working projects to support testing activities and test-case generation.
- Uses AI as a productivity aid while retaining tester review, business understanding and validation of generated outputs.

Automation & Engineering Skills

UI Automation	Selenium WebDriver, Playwright, Robot Framework
Programming / Framework	Python, Pytest, Page Object Model, reusable BasePage patterns
Test Design	Data-Driven Testing, Pytest parametrization, Keyword-Driven Testing
Synchronization	Explicit waits and condition-based synchronization for dynamic UI behavior
Reporting	Allure, Pytest HTML, execution logs and screenshots
DevOps / SCM	Git, GitHub, CI/CD, GitHub Actions and headless browser execution

Automation Portfolio Projects

Hands-on projects demonstrating framework design and automation implementation across web applications.

01**GUVI EdTech Platform Automation**

Python | Selenium | Pytest | POM | Excel | Logging

- Automated login/logout, navigation, key UI elements and assistant widget validations.
- Used Page Object Model, external Excel test data, assertions, logging and test reporting.
- Covered positive and negative scenarios with reusable browser and page components.

02**OrangeHRM Automation**

Python | Selenium | Pytest | POM | DDT | Explicit Waits

- Automated login, menus, Admin user creation/search, forgot password and My Info flows.
- Applied Excel-based Data-Driven Testing, reusable BasePage methods, separate locators and logging.
- Handled dynamic employee autosuggestions and generated-user validation with explicit waits.

03**SauceDemo E-Commerce Automation**

Python | Selenium | Pytest | DDT | Keyword-Driven | Allure | CI

- Automated login roles, random products, cart validation, sorting, checkout, logout and Reset App State.
- Implemented Excel DDT with OpenPyXL/Pytest parametrization and keyword-driven checkout using a KeywordExecutor.
- Added cross-browser execution, Allure/Pytest HTML reporting, failure screenshots and GitHub Actions CI.

Automation Framework & Delivery Approach

Data-Driven & Keyword-Driven Testing

Externalized test data in Excel using OpenPyXL and Pytest parametrization; implemented keyword-to-action mapping for reusable checkout automation.

Stability & Reusability

Used Page Object Model, BasePage utilities and explicit waits to separate test intent from Selenium implementation and synchronize with dynamic application states.

Reporting & Debugging

Generated Allure and Pytest HTML reports, maintained logs and attached screenshots for failure analysis and test evidence.

CI/CD & GitHub Integration

Integrated Git/GitHub workflows and GitHub Actions to install dependencies and execute Selenium tests in headless Chrome, enabling repeatable CI validation.

Additional Automation Exposure

Knowledge of Playwright and Robot Framework alongside Selenium, supporting flexibility across modern UI automation approaches.

Professional Value & Career Direction

What I bring to a QA Automation role

- 8+ years of industry testing experience combined with growing hands-on automation engineering capability.
- Strong functional-testing foundation and BFS / Capital Markets business understanding.
- Ability to validate across UI, API and database layers rather than focusing only on browser automation.
- Experience with enterprise test-management and defect tools including qTest, ALM and Jira.
- Practical use of AI-assisted testing tools - Helios, Aiden, Koala-T and GitHub Copilot - for productivity and test-case generation.
- Automation knowledge spanning Selenium, Playwright and Robot Framework, plus Python/Pytest framework concepts.
- Understanding of Git, GitHub integration, CI/CD, reporting and maintainable test-framework structure.

Career Objective

Seeking a QA Automation Engineer opportunity where I can combine extensive functional testing and Capital Markets domain experience with UI/API/database validation, modern automation frameworks and CI/CD practices.
